

HORIZONTAL POLYETHYLENE TANKS

- **Durable**
- **Versatile**
- **Totally Drainable**
- **Choice Of Colors**
- **Selection Of Sizes**

Wylie Horizontal Tanks are built with quality and durability in mind. The finest FDA approved resins are molded into a 1.5 specific gravity (SG) tank, resulting in a tank that will perform year after year.

Wylie horizontal tanks are designed as sprayer tanks for a variety of applications. The sump in the bottom of the tank provides for total cleanout. Fittings for suction, return, agitation and quick-fill can all be easily installed in the sump or the end of the tank.

Capacities range from 200 gallons to 500 gallons.

The tanks are cradled in Wylie manufactured steel saddles and secured with stainless steel bands.

The horizontal tanks are available in natural white or “Algae Resistant” black.

The Wylie Horizontal Tanks are the ultimate for any application where the ability to drain and clean the tank is a high priority.
